STUDENT CASE STUDY EXECUTION REPORT

Department	FED
Subject	DSA-2
Academic Year	I-III Semester (2025-26)
Faculty Name	Dr Sukanya Ledalla
Student Name	Billakanti Siri
Roll Number	2520030601
Branch	CSE
Course Outcome	CO1 – Binary Search Tree (BST)

Case Study Topic: Tinder Swipe-History Management using Binary Search Tree (BST)

Work Done Summary:

In this case study, we implemented a Binary Search Tree (BST) for Tinder's swipe-history management system. The BST stores user profile IDs in sorted order so that previously viewed profiles can be searched efficiently.

Implementation Details:

1. Created a BST node structure containing profile ID, left child, and right child.
2. Inserted profile IDs into the BST.
3. Implemented BST search operation using comparisons.
4. Demonstrated searching for a recently viewed profile.
5. Performed inorder traversal to display sorted profile IDs.

Result: Screenshots/output

```
● siribillakanti@siris-MacBook-Air VSC DSA II % javac assignment_C01.java
● siribillakanti@siris-MacBook-Air VSC DSA II % java assignment_C01
Inorder Traversal:
20 30 40 50 60 70 80
Profile ID 60 found in BST.
```
